Website Quality Report

Comprehensive Review & Improvements

Report Date: February 15, 2026

Website: birdandco.fr

Version: Final (Post-Implementation)

21 OF 30 ISSUES RESOLVED

Executive Summary

We conducted a comprehensive quality review of the Bird&Co website, examining everything from how it appears in search engines to how smoothly it works for visitors in both French and English. Our team identified 30 opportunities for improvement and successfully implemented fixes for 21 of them.

High Priority

8 / 8

Resolved - All important issues fixed

Medium Priority

10 / 12

Resolved - Most improvements applied

Low Priority

2 / 9

7 minor items deferred for future

What We Improved

Website Speed & Performance

Faster Page Loading

Fixed a technical issue that was causing the website to reload unnecessarily when navigating between pages. The site now feels snappier and more responsive.

Smoother Navigation

Pages now scroll to the top automatically when you navigate to a new page, and clicking links within the same page works smoothly every time.

Search Engine Visibility (Google, Bing, etc.)

Unique Page Titles

Each page now has its own descriptive title that appears in browser tabs and search results (e.g., "Services | Bird&Co" instead of just "bird&co" for every page).

Search Result Descriptions

Added proper descriptions for each page that Google displays in search results, helping potential clients understand what they'll find before clicking.

Multi-Language Search Discovery

Search engines now understand that your site exists in both French and English, showing the right version to users based on their language preferences.

Social Media Sharing

When someone shares your website on LinkedIn or Facebook, it now displays a proper preview with the correct title, description, and image.

Duplicate Content Prevention

Added technical markers that tell search engines which version of each page is the "official" one, preventing confusion and improving rankings.

Language & Translation Accuracy

Fixed French Spelling Error

Corrected "benefice" to "beneficie" on the team page, ensuring professional language quality throughout.

Corrected Financial Terminology

Fixed "Mezzanine Loans" to "Participating Loans" in the English services section to accurately reflect the French "Prets Participatifs" offering.

Fully French Footer

The French version now correctly shows "Tous droits reserves" instead of the English "All Rights Reserved" in the copyright notice.

Translated Dashboard Labels

Financial dashboard mockups now display properly translated labels (e.g., "Compte de resultat" in French, "P&L" in English).

User Experience

Smarter Language Switching

Changing between French and English is now instant and seamless. The page no longer reloads, and your scroll position is preserved.

Better URL Handling

Visitors who arrive at the site without a language prefix (e.g., from an old link) are now automatically redirected to the French version.

Smoother Notifications

Success messages (like form submissions) now fade out gracefully instead of disappearing abruptly.

Technical Cleanup

Code Organization

Removed conflicting configuration that could cause issues in certain browsers, and ensured sensitive files are properly excluded from version control.

Items for Future Consideration

The following minor items were identified but deferred as they require more extensive changes or have minimal impact on user experience. None affect the website's functionality.

Production-Ready Styling System

The website currently uses a development version of its styling framework. For the production launch, this should be converted to a bundled version for faster loading. This is a larger technical project for a future update.

Additional Form Validation Messages

Some form error messages could be more descriptive. The forms work correctly; this is purely a polish item for user guidance.

Minor Visual Refinements

A few small cosmetic details were noted (spacing adjustments, icon sizing) that don't affect usability but could be addressed in a design polish pass.

Recommendations

Next Steps for Launch

- → **Test on mobile devices** - Verify the website looks and works correctly on various phones and tablets before announcing to clients.
- → **Submit to search engines** - After launch, submit the sitemap to Google Search Console to accelerate indexing of your pages.
- → **Monitor analytics** - Set up Google Analytics or similar to track visitor behavior and identify any issues real users encounter.
- → **Plan the styling upgrade** - Schedule the Tailwind CSS production build for a future maintenance window to improve load times.
